Boocks, Acting Chief, Machinery and Vehicles Branch.

United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importers. Under the direction of Philip Nichols, Jr., Commissioner of Customs, and David B. Strubinger, Assistant Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

SUGGESTED BRIEF CITATION

U.S. Bureau of the Census United States Import Statistics, Report FT 110, October 1963. Washington, D.C. February 1964.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D.C. 20402 and Department of Commerce Field Offices. Price 40 cents (single copy). Subscription price: $4; $1.25 additional for foreign mailing.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as non-government shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments between the United States, its outlying possessions and Puerto Rico are not reported as United States imports, but imports into Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses.

Monthly Coverage

It is the objective of the compiling procedures, insofar as practical, to include shipments in the imports for consumption statistics for the month of import which, in general, is based on the date of filing of the consumption entry or warehouse withdrawal document.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouses, bonded manufacturing warehouses, and bonded smelting and refining warehouses immediately upon arrival. General import figures covering total trade, country totals and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico and United States possessions (not included as United States imports) is presented separately in Report No. FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report No. FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report No. FT 985. Effective with statistics for January 1962, information is being compiled on United States general imports of merchandise by air. These data are published in Reports FT 380, FT 390 and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries.[2] This verification of statistical data is made at the time the examiner reviews invoices and samples of merchandise for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals, which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to "education" of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the United States import duties, ocean freight and marine insurance.

COMMODITY INFORMATION

Commodity Classification

Effective with the statistics for September 1963, import commodity information is compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA), an official publication of the United States Tariff Commission embracing the legal text of the Tariff Schedules of the United States together with statistical annotations. TSUSA replaces Schedule A, Statistical Classification of Commodities Imported into the United

[1] For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2] For information on the effects of examiner verification, see the article entitled "Level of Accuracy in Import Statistics" in the October 1961 issue of this report.

States, which was previously used for reporting statistical data in import reports and tabulations. TSUSA also replaces United States Import Duties Annotated for Statistical Reporting (USIDA), the basic manual previously used in the initial reporting of commodity information on import entry and withdrawal forms.

The TSUSA classifications are arranged in this report in the order of the Standard International Trade Classification, Revised. The data are presented in SITC section by SITC group by TSUSA number by country of origin arrangement. The table entitled "Imports of Merchandise For Consumption By SITC Section By SITC Group" shows the SITC section and group codes and their complete descriptions. The assignment of SITC group codes to the Tariff classifications was originally made by the Tariff Commission. In some instances where a Tariff classification contains commodities which are classified in two or more SITC groups, the Tariff classification was assigned to the SITC group believed to account for the greatest proportion of imports. Correlation lists which show the SITC group code assigned to each TSUSA number and the TSUSA numbers included in each SITC group are included in the September 1963 issue of this report. Copies of these correlation lists may be obtained from the Bureau of the Census, upon request.

Some of the commodity descriptions in this report are necessarily abbreviated to save printing costs and, therefore, in many cases they do not contain all of the qualifying information necessary to clearly define the commodity for which statistics are shown. For complete description of the individual TSUSA classifications, reference should be made to Tariff Schedules of the United States Annotated (1963), Tariff Commission Publication 103, available at the office of the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, at offices of local Collectors of Customs, and Department of Commerce Field Offices. Reference should also be made to the Standard International Trade Classification, Revised (United Nations, New York, 1961--Statistical Papers, Series M, No. 34) for additional information regarding these classifications.

TSUS Data Being Prepared for Prior Periods

In order to provide some information for use in making comparisons between the statistics compiled in accordance with TSUSA and those for periods prior to the introduction of TSUSA, special publications containing data in terms of the Tariff Schedules of the United States (TSUS) are being prepared. TSUS classifications are the 5-digit Tariff items from which the 7-digit TSUSA classifications are formed by combining the 5-digit item number with a 2-digit statistical suffix. More detailed information regarding these special publications is presented in special notices included in the various monthly issues of this report.

Estimated Data for Low-Valued Imports

From January 1958 through August 1963, the data for Schedule A commodity classifications, with the exception of commodity number 9999 500, have excluded information on imports valued under $100 reported on formal immediate consumption entries and imports reported on informal entries (by definition, valued not more than $250). In addition, effective January 1963, the individual commodity classifications exclude data on warehouse withdrawals for consumption valued under $100. In compiling the statistics for September 1963 and subsequent periods, these procedures for the exclusion of low-valued imports from the individual commodity classifications will continue to be in effect. It follows that the import statistics for individual commodities are undercounted to the extent that shipments of the commodity are made in lots which are excluded from the commodity statistics under this policy. The total value so excluded amounts to about one percent of the monthly import total. Value estimates based on a one-percent sample of these "low-valued" shipments are shown by country under TSUSA number 999.9500 and are included in the totals for SITC group 990, SITC section 9 and the over-all import total. The estimates are also included in the totals for individual countries as published in Reports FT 950-I and FT 120.[3] Although subject to considerable sampling variability,[4] particularly where the estimated amounts are relatively small, these estimates may be of some interest as a rough guide to the general magnitude of the effects which the exclusion of the items has on the commodity data for individual countries.

Descriptions of the special handling of the low-valued shipments in effect prior to January 1958 are carried in the publications for those periods. These may be referred to in making comparisons of earlier figures with data for 1958 and subsequent periods. The January 1958 through December 1961 issues of this report contain a discussion of the effect on statistics of the changes made in January 1958 in the handling of low-valued shipments, and a brief summary of the handling in earlier periods.

Classifications for Which Only Quantity Information Is Reported

For technical reasons, TSUSA numbers which have been established to provide for the reporting of quantity data only are excluded from all monthly tabulations and publications. (These commodity classifications should not be confused with those which provide for the reporting of the dollar value of imports and two units of quantity under the same TSUSA number. Both units of quantity for such classifications will continue to be published.) Data for these quantity-only commodity classifications which are excluded

---

[3] See Report No. FT 930-I for handling of the low-value estimates in the import reports by economic class, and Report No. FT 970-I for the handling in the reports by Customs District.

[4] The estimated total for low-valued imports reported under TSUSA number 999.9500 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 999.9500 are subject to greater sampling variability - around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes. For more detailed indications of the effect of sampling on the estimates for low-valued imports by country see the "Explanation" in front of Report No. FT 120, U.S. Imports of Merchandise for Consumption, Country of Origin by SITC Commodity Group.

from the statistics are compiled as supplementary information which is available from the Bureau of the Census, Washington, D.C. 20233. It may be necessary to make a small charge for the transcription of this information in the form of a special report for release to interested parties. Reference copies of the supplemental information are available in the New York Office, Economic Operations Division, Bureau of the Census, Room 434, Customhouse, New York, New York.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the country of shipment is shown and footnoted in this report.

The geographic definitions of countries reported are shown in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as Annex B in TSUSA (See "Commodity Information" above). A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

To save printing costs complete commodity by country of origin information is not shown in the monthly issues of this report. For each TSUSA number, separate country of origin information is shown only for countries from which imports during the period covered by the report were $10,000 or more. Imports of that commodity originating in countries from which the amount shipped was less than $10,000 are presented as a combined total without country of origin detail and identified as "OTH CTY" (other countries).[5] Information on imports originating in countries from which the amount shipped was less than $10,000 can be supplied upon request. A charge may be made to cover the cost of preparing this detailed information.

Countries are listed for each commodity in this report according to continents, in sequence within each continent from north to south and west to east, in accordance with Schedule C. The omission of a country name under a commodity classification indicates no imports of that commodity from that country or imports of less than $10,000.

REVISIONS IN PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report for earlier months of the current and previous year are shown periodically at the back of this report. With the exception of very important changes, any revisions to data for earlier years are held for reflection in the figures to be published in Foreign Commerce and Navigation of the United States for that year.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies available for reference at public libraries). A Catalog of United States Foreign Trade Statistical Publications is also available. Supplementary information and explanations of interest to users of foreign trade statistics (such as announcements of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) which were formerly included in a separate publication, Foreign Trade Statistics Notes, are now being included as special announcements in current issues of this report and other statistical publications. Copies of such announcements are also attached to reference copies of tabulations, where appropriate. Data in this report are available for reference purposes prior to the publication of the report or may be obtained in advance of publication on payment of the cost of a special report. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

---

[5] For commodities for which quantity is reported in two different units, complete country of origin information is shown for the quantity in terms of the second unit, even though the corresponding value for some countries may be less than $10,000.

Boocks, Acting Chief, Machinery and Vehicles Branch.

United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importe Under the direction of Philip Nichols, Jr., Commissioner of Customs, and David B. Strubinger, Assistant Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

SUGGESTED BRIEF CITATION

U. S. Bureau of the Census United States Import Statistics, Report FT 110, November 1963. Washington 25, D. C. February 1964.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D.C. 20402 and Department of Commerce Field Offices. Price 40 cents (single copy). Subscription price: $4; $1.25 additional for foreign mailing.

ANNOUNCEMENTS AND SPECIAL NOTICES

ARRANGEMENT OF DATA IN THE ANNUAL 1963 ISSUE OF REPORTS FT 110 AND FT 120

Effective with the statistics for September 1963, the Tariff Schedules of the United States Annotated (TSUSA) replaced Schedule A, Statistical Classification of Commodities Imported into the United States, as the basic reference manual for use in interpreting the published data. All published import commodity statistics since September are in terms of TSUSA arranged within the 177 three-digit commodity groups of the United Nations Standard International Trade Classification (SITC).

The annual 1963 issue of Report FT 110 will reflect data as compiled in terms of Schedule A commodity classifications during January through August and TSUSA classifications during September through December 1963. At the one and three-digit SITC levels, January through December dollar value totals will be shown in the same manner as in the 1963 monthly issues of Report FT 110. These value totals will be the sum of eight months of data under Schedule A and four months of data under TSUSA. No quantity totals will be shown at the SITC level.

At the commodity level, within a given SITC group, there will be two sections of data. The first section will contain the cumulative January through August data in Schedule A number by country of origin arrangement. A second separate section will contain the cumulative September through December data in TSUSA number by country of origin arrangement. There is no official correlation between Schedule A and TSUSA numbers for 1963. Consequently it is not possible to show a 1963 annual total solely in terms of Schedule A or TSUSA.

There will be no change in the arrangement of data in the annual 1963 issue of Report FT 120, United States Imports of Merchandise for Consumption, Country of Origin by SITC Commodity Group.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as non-government shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments between the United States, its outlying possessions and Puerto Rico are not reported as United States imports, but imports into Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses.

Monthly Coverage

It is the objective of the compiling procedures, insofar as practical, to include shipments in the imports for consumption statistics for the month of import which, in general, is based on the date of filing of the consumption entry or warehouse withdrawal document.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouses, bonded manufacturing warehouses, and bonded smelting and refining warehouses immediately upon arrival. General import figures covering total trade, country totals and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico and United States possessions (not included as United States imports) is presented separately in Report No. FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report No. FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report No. FT 985. Effective with statistics for January 1962, information is being compiled on United States general imports of merchandise by air. These data are published in Reports FT 380, FT 390 and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries.[2] This verification of statistical data is made at the time the examiner reviews invoices and samples of merchandise for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals, which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to "education" of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the United States import duties, ocean freight and marine insurance.

COMMODITY INFORMATION

Commodity Classification

Effective with the statistics for September 1963, import commodity information is compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA), an official publication of the United States Tariff Commission embracing the legal text of the Tariff Schedules of the United States together with statistical annotations. TSUSA replaces Schedule A, Statistical Classification of Commodities Imported into the United

[1] For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2] For information on the effects of examiner verification, see the article entitled "Level of Accuracy in Import Statistics" in the October 1961 issue of this report.

States, which was previously used for reporting statistical data in import reports and tabulations. TSUSA also replaces United States Import Duties Annotated for Statistical Reporting (USIDA), the basic manual previously used in the initial reporting of commodity information on import entry and withdrawal forms.

The TSUSA classifications are arranged in this report in the order of the Standard International Trade Classification, Revised. The data are presented in SITC section by SITC group by TSUSA number by country of origin arrangement. The table entitled "Imports of Merchandise For Consumption By SITC Section By SITC Group" shows the SITC section and group codes and their complete descriptions. The assignment of SITC group codes to the Tariff classifications was originally made by the Tariff Commission. In some instances where a Tariff classification contains commodities which are classified in two or more SITC groups, the Tariff classification was assigned to the SITC group believed to account for the greatest proportion of imports. Correlation lists which show the SITC group code assigned to each TSUSA number and the TSUSA numbers included in each SITC group are included in the September 1963 issue of this report. Copies of these correlation lists may be obtained from the Bureau of the Census, upon request.

Some of the commodity descriptions in this report are necessarily abbreviated to save printing costs and, therefore, in many cases they do not contain all of the qualifying information necessary to clearly define the commodity for which statistics are shown. For complete description of the individual TSUSA classifications, reference should be made to Tariff Schedules of the United States Annotated (1963), Tariff Commission Publication 103, available at the office of the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, at offices of local Collectors of Customs, and Department of Commerce Field Offices. Reference should also be made to the Standard International Trade Classification, Revised (United Nations, New York, 1961--Statistical Papers, Series M, No. 34) for additional information regarding these classifications.

TSUS Data Being Prepared for Prior Periods

In order to provide some information for use in making comparisons between the statistics compiled in accordance with TSUSA and those for periods prior to the introduction of TSUSA, special publications containing data in terms of the Tariff Schedules of the United States (TSUS) are being prepared. TSUS classifications are the 5-digit Tariff items from which the 7-digit TSUSA classifications are formed by combining the 5-digit item number with a 2-digit statistical suffix. More detailed information regarding these special publications is presented in special notices included in the various monthly issues of this report.

Estimated Data for Low-Valued Imports

From January 1958 through August 1963, the data for Schedule A commodity classifications, with the exception of commodity number 9999 500, have excluded information on imports valued under $100 reported on formal immediate consumption entries and imports reported on informal entries (by definition, valued not more than $250). In addition, effective January 1963, the individual commodity classifications exclude data on warehouse withdrawals for consumption valued under $100. In compiling the statistics for September 1963 and subsequent periods, these procedures for the exclusion of low-valued imports from the individual commodity classifications will continue to be in effect. It follows that the import statistics for individual commodities are undercounted to the extent that shipments of the commodity are made in lots which are excluded from the commodity statistics under this policy. The total value so excluded amounts to about one percent of the monthly import total. Value estimates based on a one-percent sample of these "low-valued" shipments are shown by country under TSUSA number 999.9500 and are included in the totals for SITC group 990, SITC section 9 and the over-all import total. The estimates are also included in the totals for individual countries as published in Reports FT 950-I and FT 120.[3] Although subject to considerable sampling variability,[4] particularly where the estimated amounts are relatively small, these estimates may be of some interest as a rough guide to the general magnitude of the effects which the exclusion of the items has on the commodity data for individual countries.

Descriptions of the special handling of the low-valued shipments in effect prior to January 1958 are carried in the publications for those periods. These may be referred to in making comparisons of earlier figures with data for 1958 and subsequent periods. The January 1958 through December 1961 issues of this report contain a discussion of the effect on statistics of the changes made in January 1958 in the handling of low-valued shipments, and a brief summary of the handling in earlier periods.

Classifications for Which Only Quantity Information Is Reported

For technical reasons, TSUSA numbers which have been established to provide for the reporting of quantity data only are excluded from all monthly tabulations and publications. (These commodity classifications should not be confused with those which provide for the reporting of the dollar value of imports and two units of quantity under the same TSUSA number. Both units of quantity for such classifications will continue to be published.) Data for these quantity-only commodity classifications which are excluded

---

[3] See Report No. FT 930-I for handling of the low-value estimates in the import reports by economic class, and Report No. FT 970-I for the handling in the reports by Customs District.

[4] The estimated total for low-valued imports reported under TSUSA number 999.9500 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 999.9500 are subject to greater sampling variability - around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes. For more detailed indications of the effect of sampling on the estimates for low-valued imports by country see the "Explanation" in front of Report No. FT 120, U.S. Imports of Merchandise for Consumption, Country of Origin by SITC Commodity Group.

from the statistics are compiled as supplementary information which is available from the Bureau of the Census, Washington, D.C. 20233. It may be necessary to make a small charge for the transcription of this information in the form of a special report for release to interested parties. Reference copies of the supplemental information are available in the New York Office, Economic Operations Division, Bureau of the Census, Room 434, Customhouse, New York, New York.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the country of shipment is shown and footnoted in this report.

The geographic definitions of countries reported are shown in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as Annex B in TSUSA (See "Commodity Information" above). A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

To save printing costs complete commodity by country of origin information is not shown in the monthly issues of this report. For each TSUSA number, separate country of origin information is shown only for countries from which imports during the period covered by the report were $10,000 or more. Imports of that commodity originating in countries from which the amount shipped was less than $10,000 are presented as a combined total without country of origin detail and identified as "OTH CTY" (other countries).[5] Information on imports originating in countries from which the amount shipped was less than $10,000 can be supplied upon request. A charge may be made to cover the cost of preparing this detailed information.

Countries are listed for each commodity in this report according to continents, in sequence within each continent from north to south and west to east, in accordance with Schedule C. The omission of a country name under a commodity classification indicates no imports of that commodity from that country or imports of less than $10,000.

REVISIONS IN PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report for earlier months of the current and previous year are shown periodically at the back of this report. With the exception of very important changes, any revisions to data for earlier years are held for reflection in the figures to be published in Foreign Commerce and Navigation of the United States for that year.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies available for reference at public libraries). A Catalog of United States Foreign Trade Statistical Publications is also available. Supplementary information and explanations of interest to users of foreign trade statistics (such as announcements of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) which were formerly included in a separate publication, Foreign Trade Statistics Notes, are now being included as special announcements in current issues of this report and other statistical publications. Copies of such announcements are also attached to reference copies of tabulations, where appropriate. Data in this report are available for reference purposes prior to the publication of the report or may be obtained in advance of publication on payment of the cost of a special report. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.

---

[5] For commodities for which quantity is reported in two different units, complete country of origin information is shown for the quantity in terms of the second unit, even though the corresponding value for some countries may be less than $10,000.

IMPORTS OF MERCHANDISE FOR CONSUMPTION BY SITC SECTION BY SITC GROUP

NOVEMBER 1963

United States import statistics are compiled from information verified by Customs Examiners on import entries filed with Customs by importe Under the direction of Philip Nichols, Jr., Commissioner of Customs, and David B. Strubinger, Assistant Commissioner of Customs, the primary responsibility for the verification of import statistical information is assigned to the field and headquarters staff of the Division of Appraisement Administration.

SUGGESTED BRIEF CITATION

U. S. Bureau of the Census United States Import Statistics, Report FT 110, December 1963. Washington 25, D. C. March 1964.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D.C. 20402 and Department of Commerce Field Offices. Price 40 cents (single copy). Subscription price: $4; $1.25 additional for foreign mailing.

ANNOUNCEMENTS AND SPECIAL NOTICES

SUPPLEMENT CONTAINING DATA TO BE ADDED TO THE IMPORT STATISTICS FOR SEPTEMBER 1963

Due to processing errors, some revisions are required in the statistics on imports of textile commodities for consumption during the month of September 1963, as indicated in the Supplement which follows. The revisions involve the addition of about $1.5 million to the September 1963 total. The data in the Supplement, except that for TSUSA number 3212092, are to be added to the statistics published in Report FT 110 for the month of September. Quantity data for TSUSA number 3212092 are to be subtracted. Before adding or subtracting the data, reference should be made to the "Revisions in Previous Months' Reports" section at the rear of this report for any revisions to the previously published September 1963 statistics (shown on a "Reads" and "Should Read" basis).

SUPPLEMENT TO THE SEPTEMBER 1963 STATISTICS ON UNITED STATES IMPORTS OF MERCHANDISE FOR CONSUMPTION

The following data are to be added to the import statistics for the month of September 1963. See the explanation on page i.

GENERAL EXPLANATION

COVERAGE

Types of Shipments Included

The import statistics include government as well as non-government shipments of merchandise from foreign countries to the United States. However, American goods returned by the United States armed forces for their own use are excluded. Shipments between the United States, its outlying possessions and Puerto Rico are not reported as United States imports, but imports into Puerto Rico from foreign countries are considered to be United States imports and are included in this report. Merchandise shipped under Customs custody through the United States in transit from one foreign country to another is not reported as imports. In general, the import statistics are a complete record of the physical movement of merchandise into the United States from foreign countries (except for intransit shipments), but there are some exclusions of items of relatively small importance in terms of total value, such as personal and household effects.

Imports for consumption shown in this report consist of merchandise entered into United States consumption channels, i.e., merchandise released from Customs custody immediately upon arrival, merchandise entered into bonded manufacturing warehouses (other than smelting and refining warehouses), merchandise withdrawn from bonded storage warehouses for release into domestic consumption channels, and imported ores and crude metals which have been processed in bonded smelting warehouses.

Monthly Coverage

It is the objective of the compiling procedures, insofar as practical, to include shipments in the imports for consumption statistics for the month of import which, in general, is based on the date of filing of the consumption entry or warehouse withdrawal document.[1] However, because of processing problems, there has always been a carry-over of a small percentage of items from the proper month to a subsequent month (usually the month immediately following). The amount of this carry-over was increased a few years ago in order to take advantage of early release dates made possible with the use of electronic equipment.

RELATED INFORMATION

Information is also compiled for general imports, which represent total arrivals of imported goods (except for intransit shipments), i.e., merchandise released from Customs custody immediately upon arrival plus merchandise entered into bonded storage warehouses, bonded manufacturing warehouses, and bonded smelting and refining warehouses immediately upon arrival. General import figures covering total trade, country totals and Customs district totals are published monthly. General import commodity statistics are not published but are available for reference purposes.

Trade between the United States, Puerto Rico and United States possessions (not included as United States imports) is presented separately in Report No. FT 800. Statistics on the movement of intransit merchandise arriving at or leaving the United States by vessel (not included in this report) are also compiled and presented in summary form in Report No. FT 985. In addition, transportation statistics (showing shipping weight as well as value information) are compiled covering that part of general imports of merchandise which arrives by vessel. Summary vessel transportation statistics for both imports and exports are presented in Report No. FT 985. Effective with statistics for January 1962, information is being compiled on United States general imports of merchandise by air. These data are published in Reports FT 380, FT 390 and FT 986. A more complete description of the coverage and presentation of the various types of statistics mentioned above will be found in the introductions to the specified reports.

SOURCE OF INFORMATION

The source of information for all of the imports included in this report is the import entry and warehouse withdrawal forms which importers are required to file with Collectors of Customs. Effective January 1, 1962, statistical factors of country of origin, net quantity, value, and commodity classification are verified or corrected as necessary by Customs examiners on all formal consumption and warehouse entries.[2] This verification of statistical data is made at the time the examiner reviews invoices and samples of merchandise for duty and other Customs purposes, and the statistical copy of the entry is corrected by the examiner at that time if he finds that it does not accurately reflect the information called for by the statistical requirements. Information on warehouse withdrawals, which account for approximately 10 percent of the total value of imports for consumption, while not subject to the examiner verification procedure directly, should be improved indirectly (due to "education" of importers/brokers) by the verification of the warehouse entries to which they correspond.

VALUATION

The dollar value shown in the import statistics is defined generally as the market value in the foreign country, excluding the United States import duties, ocean freight and marine insurance.

COMMODITY INFORMATION

Commodity Classification

Effective with the statistics for September 1963, import commodity information is compiled in accordance with the classifications in Tariff Schedules of the United States Annotated (TSUSA), an official publication of the United States Tariff Commission embracing the legal text of the Tariff Schedules of the United States together with statistical annotations. TSUSA replaces Schedule A, Statistical Classification of Commodities Imported into the United

[1] For shipments by vessel, merchandise is not included in the statistics prior to the date of formal entrance of the vessel (i.e., the date of the inward Customs manifest for the vessel).

[2] For information on the effects of examiner verification, see the article entitled "Level of Accuracy in Import Statistics" in the October 1961 issue of this report.

States, which was previously used for reporting statistical data in import reports and tabulations. TSUSA also replaces United States Import Duties Annotated for Statistical Reporting (USIDA), the basic manual previously used in the initial reporting of commodity information on import entry and withdrawal forms.

The TSUSA classifications are arranged in this report in the order of the Standard International Trade Classification, Revised. The data are presented in SITC section by SITC group by TSUSA number by country of origin arrangement. The table entitled "Imports of Merchandise For Consumption By SITC Section By SITC Group" shows the SITC section and group codes and their complete descriptions. The assignment of SITC group codes to the Tariff classifications was originally made by the Tariff Commission. In some instances where a Tariff classification contains commodities which are classified in two or more SITC groups, the Tariff classification was assigned to the SITC group believed to account for the greatest proportion of imports. Correlation lists which show the SITC group code assigned to each TSUSA number and the TSUSA numbers included in each SITC group are included in the September 1963 issue of this report. Copies of these correlation lists may be obtained from the Bureau of the Census, upon request.

Some of the commodity descriptions in this report are necessarily abbreviated to save printing costs and, therefore, in many cases they do not contain all of the qualifying information necessary to clearly define the commodity for which statistics are shown. For complete description of the individual TSUSA classifications, reference should be made to Tariff Schedules of the United States Annotated (1963), Tariff Commission Publication 103, available at the office of the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, at offices of local Collectors of Customs, and Department of Commerce Field Offices. Reference should also be made to the Standard International Trade Classification, Revised (United Nations, New York, 1961--Statistical Papers, Series M, No. 34) for additional information regarding these classifications.

TSUS Data Being Prepared for Prior Periods

In order to provide some information for use in making comparisons between the statistics compiled in accordance with TSUSA and those for periods prior to the introduction of TSUSA, special publications containing data in terms of the Tariff Schedules of the United States (TSUS) are being prepared. TSUS classifications are the 5-digit Tariff items from which the 7-digit TSUSA classifications are formed by combining the 5-digit item number with a 2-digit statistical suffix. More detailed information regarding these special publications is presented in special notices included in the various monthly issues of this report.

Estimated Data for Low-Valued Imports

From January 1958 through August 1963, the data for Schedule A commodity classifications, with the exception of commodity number 9999 500, have excluded information on imports valued under $100 reported on formal immediate consumption entries and imports reported on informal entries (by definition, valued not more than $250). In addition, effective January 1963, the individual commodity classifications exclude data on warehouse withdrawals for consumption valued under $100. In compiling the statistics for September 1963 and subsequent periods, these procedures for the exclusion of low-valued imports from the individual commodity classifications will continue to be in effect. It follows that the import statistics for individual commodities are undercounted to the extent that shipments of the commodity are made in lots which are excluded from the commodity statistics under this policy. The total value so excluded amounts to about one percent of the monthly import total. Value estimates based on a one-percent sample of these "low-valued" shipments are shown by country under TSUSA number 999.9500 and are included in the totals for SITC group 990, SITC section 9 and the over-all import total. The estimates are also included in the totals for individual countries as published in Reports FT 950-I and FT 120.[3] Although subject to considerable sampling variability,[4] particularly where the estimated amounts are relatively small, these estimates may be of some interest as a rough guide to the general magnitude of the effects which the exclusion of the items has on the commodity data for individual countries.

Descriptions of the special handling of the low-valued shipments in effect prior to January 1958 are carried in the publications for those periods. These may be referred to in making comparisons of earlier figures with data for 1958 and subsequent periods. The January 1958 through December 1961 issues of this report contain a discussion of the effect on statistics of the changes made in January 1958 in the handling of low-valued shipments, and a brief summary of the handling in earlier periods.

Classifications for Which Only Quantity Information Is Reported

For technical reasons, TSUSA numbers which have been established to provide for the reporting of quantity data only are excluded from all monthly tabulations and publications. (These commodity classifications should not be confused with those which provide for the reporting of the dollar value of imports and two units of quantity under the same TSUSA number. Both units of quantity for such classifications will continue to be published.) Data for these quantity-only commodity classifications which are excluded

---

[3] See Report No. FT 930-1 for handling of the low-value estimates in the import reports by economic class, and Report No. FT 970-I for the handling in the reports by Customs District.

[4] The estimated total for low-valued imports reported under TSUSA number 999.9500 is subject to a sampling variability of 3 to 4 percent. This means that the chances are 2 out of 3 that a complete tabulation would have resulted in a figure that differed from the estimate by no more than 3 to 4 percent. The estimates by country under commodity number 999.9500 are subject to greater sampling variability - around 10 percent for countries with about 200 low-valued shipments in the sample; around 20 percent for countries with about 75 shipments in the sample; and over 20 percent for smaller sample sizes. For more detailed indications of the effect of sampling on the estimates for low-valued imports by country see the "Explanation" in front of Report No. FT 120, U.S. Imports of Merchandise for Consumption, Country of Origin by SITC Commodity Group.

from the statistics are compiled as supplementary information which is available from the Bureau of the Census, Washington, D.C. 20233. It may be necessary to make a small charge for the transcription of this information in the form of a special report for release to interested parties. Reference copies of the supplemental information are available in the New York Office, Economic Operations Division, Bureau of the Census, Room 434, Customhouse, New York, New York.

COUNTRY OF ORIGIN

The country reported in the statistics as the country of origin is defined as the country where the merchandise was grown, mined, or manufactured. In instances where it is known that the country of origin cannot be determined, the country of shipment is shown and footnoted in this report.

The geographic definitions of countries reported are shown in Schedule C, Classification of Country Designations Used in Compiling the United States Foreign Trade Statistics. Country names which are abbreviated in this report to save space are shown in full in Schedule C, together with descriptions of the countries, adjacent provinces, territories, islands, or other areas considered a part of the country for statistical purposes. Schedule C is published as Annex B in TSUSA (See "Commodity Information" above). A separate edition of Schedule C is also available free upon request to the Bureau of the Census.

To save printing costs complete commodity by country of origin information is not shown in the monthly issues of this report. For each TSUSA number, separate country of origin information is shown only for countries from which imports during the period covered by the report were $10,000 or more. Imports of that commodity originating in countries from which the amount shipped was less than $10,000 are presented as a combined total without country of origin detail and identified as "OTH CTY" (other countries).[5] Information on imports originating in countries from which the amount shipped was less than $10,000 can be supplied upon request. A charge may be made to cover the cost of preparing this detailed information.

Countries are listed for each commodity in this report according to continents, in sequence within each continent from north to south and west to east, in accordance with Schedule C. The omission of a country name under a commodity classification indicates no imports of that commodity from that country or imports of less than $10,000.

[5] For commodities for which quantity is reported in two different units, complete country of origin information is shown for the quantity in terms of the second unit, even though the corresponding value for some countries may be less than $10,000.

REVISIONS IN PREVIOUS MONTHS' REPORTS

Significant revisions to data published in this report for earlier months of the current and previous year are shown periodically at the back of this report. With the exception of very important changes, any revisions to data for earlier years are held for reflection in the figures to be published in Foreign Commerce and Navigation of the United States for that year.

SOURCES OF FURTHER INFORMATION ABOUT IMPORT STATISTICS

A complete discussion of the compilation procedures and coverage for import statistics will be found in the Foreword to the latest edition of Foreign Commerce and Navigation of the United States. (Copies available for reference at public libraries). A Catalog of United States Foreign Trade Statistical Publications is also available. Supplementary information and explanations of interest to users of foreign trade statistics (such as announcements of changes in types of shipments covered by current statistics, unusual shipments, problems of valuation and classification, changes in statistical procedures, etc.) which were formerly included in a separate publication, Foreign Trade Statistics Notes, are now being included as special announcements in current issues of this report and other statistical publications. Copies of such announcements are also attached to reference copies of tabulations, where appropriate. Data in this report are available for reference purposes prior to the publication of the report or may be obtained in advance of publication on payment of the cost of a special report. Reports providing additional detail compiled but not published can be obtained on a cost basis. For free copies of the catalog or for further information regarding reference copies of tabulations or the availability of special reports, request should be made to the Bureau of the Census.
